

adrian bejan constructal theory pdf

Adrian Bejan is a Romanian American professor who has made contributions to modern thermodynamics and developed what he calls the constructal law. He is J. A. Jones Distinguished Professor of Mechanical Engineering at Duke University [1] [2] and author of the 2016 book *The Physics of Life: The Evolution of Everything* .

The Benjamin Franklin Medal (2018) was awarded to Adrian Bejan for thermodynamics and "constructal theory, which predicts natural design and its evolution in engineering, scientific, and social systems." The constructal law is receiving wide acceptance in the scientific literature.

Constructal Theory: From Engineering to Physics, and How

Bejan argues they continued to thrive. He thinks his "constructal theory," which he began describing in 1996, might explain why. The theory states that so-called flowsystems evolve to balance and minimize imperfections, reducing friction or other forms of resistance, so that the least amount of useful energy is lost.

new book Design with Constructal Theory (Wiley, 2008, by A. Bejan and S. Lorente) and at www.constructal.org. Adrian postulated that "For a finite-size, low system to persist in time (to live) its configuration must evolve in time in such a way that it provides easier and easier access to its currents".
