Because the fundamentals of Set Theory are known to all mathematicians, basic problems in the subject seem elementary. Here are three simple statements about sets and functions. They look like they could appear on a homework assignment in an undergraduate course. 1. For any two sets  $X$  and  $Y$ , either there is a one-to-one function from

itive set theory) are no longer treated as separate subjects. The progress in past quarter century has blurred the distinction between these areas: forcing has become an indispensable tool of every set theorist, while descriptive set theory has practically evolved into the study of  $L(R)$  under large cardinal assumptions.
