Since reliability is a probability, it is expressed in decimals of 1.00 as given below. Reliability = 1.00 means certain to work as intended. Reliability = 0.99 means 99 percent likely to work as intended. Reliability = 0.50 means 50 percent likely to work as intended. Reliability = 0.00 means absolutely certain not to work as intended.

CHAPTER 3 SYSTEM RELIABILITY MODELS AND REDUNDANCY

Introduction to reliability (Portsmouth Business School, April 2012) 2 After this, the reliability, $R(t)$, will decline as some components fail (to perform in a satisfactory manner). The failure rate The failure rate (usually represented by the Greek letter λ) is a very useful quantity. This is defined as

Introduction to reliability - Michael Wood

SUPPLEMENT TO CHAPTER 4 Reliability 3 Even though the individual components of a series system (product) might have high reliability, the series system (product) as a whole can have considerably less reliability because all its components must function (i.e., the system is dependent on each of its components).
