The 20th Cambridge Workshop on Cool Stars, Stellar Systems, and the Sun Table 2: We show the χ^2 value for whether each rotation phase bin (split into ten) had δ ares which were randomly distributed by phase. We split the δ ares into low and high energy where the cut ϕ is determined by the median energy of all the δ ares for each star.

Proceedings of the 18th Cambridge Workshop on Cool Stars

Cool stars with exoplanets in close orbits may be a fundamental exception from the age-activity-rotation relationships which govern other cool stars. In analogy to close stellar binaries, a planet and its star are thought to interact tidally and magnetically.
