Exciton-polaritons in bulk semiconductors and in systems

The developments of nanostructure physics led to several new phenomena and concepts related to radiation-matter interaction and stimulated novel studies of excitons and polaritons in confined electron and photon systems.

Electron And Photon Confinement In Semiconductor

Quantum confinement effect-an overview ... the rest mass of the electron, ... by absorbing a photon. The state in the conduction band has to have essentially the same momentum because the photon has essentially no momentum on the scale usually of interest in semiconductors. In

CHAPTER I 1. INTRODUCTION 1.1. Quantum confinement effect

We have fabricated systems with three - dimensional photon confinement. These structures are based on epitaxially grown heterostructures providing one dimension of photon confinement. In the plane photonic confinement effects are obtained by microfabrication techniques using electron beam lithography and dry etching.
