Characteristics of Embedded Systems (2) Must be efficient! Energy efficient! Code-size efficient (especially for systems on a chip)! Run-time efficient! Weight efficient! Cost efficient Dedicated towards a certain application: Knowledge about behavior at design time can be used to minimize resources and to maximize robustness.

1. Introduction to Embedded System Design

Embedded Systems must be of a size to fit on a single chip, must perform fast enough to process data in real time and consume minimum power to extend battery life. Reactive and Real time " Many embedded systems must continually react to changes in the system's environment and must compute certain results in real time without any delay.
