Adjusting Structural Adjustment: The Role of the

1. Introduction. Graphene oxide (GO) is an atomic sheet of graphite decorated by several oxygenated functional groups on its basal planes and at its edges, resulting in a hybrid structure comprising a mixture of sp² and sp³ hybridized carbon atoms. GO can be synthesized by the oxidation of graphite into graphite oxide followed by the exfoliation of this graphitic oxide into GO.

The chemical and structural analysis of graphene oxide

Structural health monitoring (SHM) refers to the process of implementing a damage detection and characterization strategy for engineering structures. Here damage is defined as changes to the material and/or geometric properties of a structural system, including changes to the boundary conditions and system connectivity, which adversely affect the system's performance.
