To analyze a structure properly, certain idealizations must be made as to how the members are supported and connected together. The loadings are determined from codes and local specifications, and the forces in the members and their displacements are found using the theory of structural analysis, which is the subject matter of this text.

The theory of structuration is a social theory of the creation and reproduction of social systems that is based in the analysis of both structure and agents (see structure and agency), without giving primacy to either. Further, in structuration theory, neither micro- nor macro-focused analysis alone is sufficient. The theory was proposed by sociologist Anthony Giddens, most significantly in The ...
